Biology is the natural science that studies life and living organisms, including their physical structure, chemical processes, molecular interactions, physiological mechanisms, development and evolution. Despite the complexity of the science, there are certain unifying concepts that consolidate it into a single, coherent field. Biology recognizes the cell as the basic unit of life, genes as ...

The Biology covers the study of all the living beings and their interactions into the biosphere. This is a very important task because we are able to know the behavior or functioning of each population when it faces to other individuals from other populations or communities and how the populations or the specific sectors of the biosphere are affected and/or benefited by that behavior or ...
