In mathematics, trigonometric identities are equalities that involve trigonometric functions and are true for every value of the occurring variables where both sides of the equality are defined. Geometrically, these are identities involving certain functions of one or more angles. They are distinct from triangle identities, which are identities potentially involving angles but also involving ...

It's a pity isn't quite worn out yet, but using Pity! as a complete sentence is distinctively "Britishy". What is old-fashioned is to use the 'tis contraction instead of it is: `tis a pity!. The word pity is both a verb and noun. Should the public pity Lance Armstrong? It is an important word in the English language for which there is no equally glib substitute.

I'm aware of several ways that functions can be calculated, and have written my own routines to compute functions using Taylor series for fun. I'm curious about how real, production languages do it, since all of my implementations are always several orders of magnitude slower, even though I think my algorithms are pretty clever (obviously they're not).
