a) A Normal model is not appropriate for the sampling distribution of the sample maximum. The histogram is skewed strongly to the left. b) No. The 95% rule is based on the Normal model, and the Normal model is not appropriate here. 10. Soup. a) A Normal model is not appropriate for the sampling distribution of the sample variances.

Chapter 18: Sampling Distribution Models - Quia

A Sampling Distribution Model for a Proportion A proportion is no longer just a computation from a set of data. o It is now a random quantity that has a distribution. o This distribution is called the sampling distribution model for proportions. Even though we depend on sampling distribution models, we never actually get to see them.

Chapter 18 Summary Sampling Distribution Models

Chapter 18: Sampling Distribution Models AP Statistics RNB Briones Concord High 3 The parameter p is the population proportion. In practice, this value is always unknown. (If we know the population proportion, then there is no need for a sample.) The statistic $\hat{p} = \frac{x}{n}$ is the sample proportion. We use \hat{p} to estimate the value of p .
