Bony fish. Bony fish include the lobe-finned fish and the ray finned fish. The lobe-finned fish is the class of fleshy finned fishes, consisting of lungfish, and coelacanths. They are bony fish with fleshy, lobed paired fins, which are joined to the body by a single bone. These fins evolved into the legs of the first tetrapod land vertebrates, amphibians. ...

Animal Physiology - Pearson

Animals are multicellular eukaryotic organisms that form the biological kingdom Animalia. With few exceptions, animals consume organic material, breathe oxygen, are able to move, can reproduce sexually, and grow from a hollow sphere of cells, the blastula, during embryonic development. Over 1.5 million living animal species have been described—of which around 1 million are insects—but it has ...

Duane Gish, noted creationist, lays out a case against evolution, drawing on evidence from the fossil record, homology, vestigial organs, molecular biology, embryology, and the Second Law of Thermodynamics. Read More →The Scientific Evidence for Creation

The Scientific Evidence for Creation - Summit Ministries

Les poissons sont des animaux vertébrés aquatiques à branchies, pourvus de nageoires et dont le corps est le plus souvent couvert d'écailles. On les trouve abondamment aussi bien dans les eaux douces que dans les mers : on trouve des espèces depuis les sources de montagnes (omble de fontaine, goujon) jusqu'au plus profond des océans (grandgousier, poisson-ogre).
