ServSafe Practice Test & Answers - May 2019 Edition

In short, standard UTI test methods do not work well. You may have experienced what many others have - a negative UTI test result even though you feel like you have a UTI. If you've found yourself in this situation once, twice or many times, it's time to learn why this could be happening.

Why Your UTI Test May Be Negative Even When You Have Symptoms

A vertically transmitted infection is an infection caused by pathogens (such as bacteria and viruses) that uses mother-to-child transmission, that is, transmission directly from the mother to an embryo, fetus, or baby during pregnancy or childbirth. It can occur when the mother gets an infection as an intercurrent disease in pregnancy. Nutritional deficiencies may exacerbate the risks of ...
