### Energy in Everyday Life Chapter Exam - Study.com

In physics, energy is the quantitative property that must be transferred to an object in order to perform work on, or to heat, the object. Energy is a conserved quantity; the law of conservation of energy states that energy can be converted in form, but not created or destroyed. The SI unit of energy is the joule, which is the energy transferred to an object by the work of moving it a distance ...

The great majority of large breakers seen at a beach result from distant winds. Five factors influence the formation of the flow structures in wind waves: Wind speed or strength relative to wave speed—the wind must be moving faster than the wave crest for energy transfer; The uninterrupted distance of open water over which the wind blows without significant change in direction (called the fetch)
