Evidence of common descent of living organisms has been discovered by scientists researching in a variety of disciplines over many decades, demonstrating that all life on Earth comes from a single ancestor. This forms an important part of the evidence on which evolutionary theory rests, demonstrates that evolution does occur, and illustrates the processes that created Earth's biodiversity.

Genetic pollution is a controversial term for uncontrolled gene flow into wild populations. It is defined as "the dispersal of contaminated altered genes from genetically engineered organisms to natural organisms, esp. by cross-pollination", but has come to be used in some broader ways. It is related to the population genetics concept of gene flow, and genetic rescue, which is genetic ...

1. Introduction. Over the last 5–10 years enormous progress has been made in identifying genetic variants underlying various phenotypes, including different complex diseases and complex traits. Genome-wide association studies (GWAS), which aim to correlate allele frequencies of single nucleotide polymorphisms (SNPs) with a disease status or trait variation in a human population, have now ...

Species of *Trichinella* inhabit a broad geographic range from the arctic to the tropics, however, distributions of individual species are more restricted, with encapsulated species generally demonstrating adaptation to colder climates than nonencapsulated species. With the exception of some nonencapsulated species noted (see section 1.1), major host groups of *Trichinella* spp. are domestic and ...
