In statistics, a full factorial experiment is an experiment whose design consists of two or more factors, each with discrete possible values or "levels", and whose experimental units take on all possible combinations of these levels across all such factors. A full factorial design may also be called a fully crossed design. Such an experiment allows the investigator to study the effect of each ...

In this book I have tried to explain why I think that percentages are “the most useful statistics ever invented”. I hope you agree. But even if you don't, I hope you now know a lot more about percentages than you did when you started reading the book. I also said I would tell you why 153 is one of my favorite numbers.
