Birds & Mammals Lesson Plans - Videos & Lessons | Study.com

By this definition, birds have all of the attributes that would make them reptiles, despite that they are warm-blooded. Mammals, however, did not have this hole in the skull at any time in their evolution, and no mammal has four-color vision (even primates like us have only three), so by this new definition, mammals are NOT descended from reptiles.

Are birds reptiles? - UCSB Science Line

Although birds are considered distinct from reptiles, they evolved from a group of dinosaurs, so considering them separately from reptiles is not phylogenetically accurate. Key Terms synapsid : animals that have one opening low in the skull roof behind each eye; includes all living and extinct mammals and therapsids
