Read a short article about how restriction enzymes are used to cut bits of DNA and those bits can be inserted into the genome of other organisms. Restriction enzymes are specific to a section of DNA, depending on the base pairs at that section, you will analyze sections of DNA and determine which restriction enzyme should be used.

The E. coli Insulin Factory BACKGROUND Bacteria have not only their normal DNA, they also have pieces of circular DNA called plasmids. Plasmids are a wonderfully ally for biologists who desire to get bacteria to produce very specific proteins. The plasmids conveniently can be cut, fused with other DNA and then reabsorbed by bacteria.
