The cranial nerve examination is often considered one of the most difficult OSCE stations, but with plenty of practice, you'll be fine. The important thing to remember is that in an OSCE you'll not be required to complete an entire cranial nerve exam in one station. This guide provides a step by step approach to cranial nerve examination, with an included video demonstration.

1. Introduction. It has been 20 years since the publication of the first IFCN-endorsed report on “Non-invasive electrical and magnetic stimulation of the brain, spinal cord and roots: basic principles and procedures for routine clinical application” (Rossini et al., 1994). This report has been useful and has been cited 1805 times to date (Google Scholar, 7th December 2014).

Evoked Brain Potentials, Evoked Responses, Evoked Potential Studies. Evoked potential tests measure the brain's response to stimuli that are delivered through sight, hearing, or touch. These sensory stimuli evoke minute electrical potentials that travel along nerves to the brain, and can be recorded with patch-like sensors (electrodes) that are attached to the scalp and skin over various ...

World Health Organization (WHO) Updates Official Classification of Tumors of the Central Nervous System. On May 9, 2016, the World Health Organization (WHO) published an official reclassification of Tumor Types of the Central Nervous System, which has moved the greater neuro-oncology field toward a more precise and accurate system of brain tumor classification.

### **Tumor Types - National Brain Tumor Society**

Extra-axial brain tumors are the most common adult intracranial neoplasms and encompass a broad spectrum of pathologic subtypes. Meningiomas are the most common extra-axial brain tumor (approximately one-third of all intracranial neoplasms) and typically present as slowly growing dural-based masses.
