A circle is the set of points in a plane that are equidistant from a given point O. The distance  $r$  from the center is called the radius, and the point O is called the center. Twice the radius is known as the diameter  $d=2r$ . The angle a circle subtends from its center is a full angle, equal to 360 degrees or  $2\pi$  radians. A circle has the maximum possible area for a given perimeter, and the ...

There's more to plot than identifying the series of events in a story. After viewing a PowerPoint presentation on plot structure, students identify the significant events that shape the structure of a familiar fairy tale, "Jack and the Beanstalk," using an online graphic organizer. Students then read short stories as a whole class, in small groups, and, finally, individually, analyzing the ...

A great circle is a section of a sphere that contains a diameter of the sphere (Kern and Bland 1948, p. 87). Sections of the sphere that do not contain a diameter are called small circles. A great circle becomes a straight line in a gnomonic projection (Steinhaus 1999, pp. 220-221). The shortest path between two points on a sphere, also known as an orthodrome, is a segment of a great circle.

Understanding quantity is pivotal to your students' ability to develop number sense. Students who possess a solid understanding of quantity will likely excel at estimating, comparing, and reasoning with numbers, and eventually, proportional reasoning – that is, using relationships between quantities, such as knowing that 1 dozen is 12, so 3 dozen is 36.

The scale of a map is the ratio of a distance on the map to the corresponding distance on the ground. This simple concept is complicated by the curvature of the Earth's surface, which forces scale to vary across a map. Because of this variation, the concept of scale becomes meaningful in two distinct ways.

William Lane Craig is a prolific Christian philosopher, apologist, author, and public debater. He is the best debater – on any topic – that I've ever heard. As far as I can tell, he has won nearly all his debates with atheists. When debating him, atheists have consistently failed to put forward solid arguments, and consistently failed to point out the flaws in Craig's arguments.

Any Star Trek fan can tell you that when it comes to the most bang for your buck, you can't beat antimatter (sometimes called "Contra-terrene" or "Seetee"). How much bang? Well, in theory if you mix one gram of matter with one gram of antimatter you should get  $1.8 \times 10^{14}$  joules of energy or about 43 kilotons.
