1 Introduction. The repertory grid technique (RGT or RepGrid) is a method for eliciting personal constructs, i.e. what people think about a given topic. It is based on George Kelly's Personal Construct Theory in 1955 and was also initially developed within this context. Personal Construct Psychology (PCP) states that people's view of objects they interact with is made up of a collection of ...

Scientific control studies in medicine that attempt to determine whether something is a significant causal factor in producing a specific effect often use placebos as a control. In most of these studies, the placebo is defined as an inert substance, and it is pitted against an active substance to see if there is any significant difference in outcome in different groups.
