Anatomy and Physiology of - Jones & Bartlett Learning

Proper physiological functioning depends on a very tight balance between the concentrations of acids and bases in the blood. Acid-base balance is measured using the pH scale, as shown in Figure 1. A variety of buffering systems permits blood and other bodily fluids to maintain a narrow pH range, even in the face of perturbations.

26.4 Acid-Base Balance - Anatomy and Physiology

Dear Friend, Are you looking to learn anatomy and physiology? You're about to discover the most spectacular gold mine of human anatomy & physiology materials and diagrams ever created for commercial sale. I'm about to share with you everything you'll ever need to know about human anatomy, physiology and drug therapy, complete with diagrams, courses, lesson plans, quizzes and solutions.

A common sign of impaired liver function is jaundice, a yellowness of the eyes and skin arising from excessive bilirubin in the blood. Jaundice can result from an abnormally high level of red blood cell destruction (hemolytic jaundice), defective uptake or transport of bilirubin by the hepatic cells (hepatocellular jaundice), or a blockage in the bile duct system (obstructive jaundice).

Liver | anatomy | Britannica.com

Bone, or osseous tissue, is a hard, dense connective tissue that forms most of the adult skeleton, the support structure of the body. In the areas of the skeleton where bones move (for example, the ribcage and joints), cartilage, a semi-rigid form of connective tissue, provides flexibility and smooth surfaces for movement.

Conditions and Diseases | Johns Hopkins Medicine

The human body is the structure of a human being. It is composed of many different types of cells that together create tissues and subsequently organ systems. They ensure homeostasis and the viability of the human body. It comprises a head, neck, trunk (which includes the thorax and abdomen), arms and hands, legs and feet. The study of the human body involves anatomy, physiology, histology and ...

Human body - Wikipedia

Blood is the "river of life" that surges within us. It transports everything that must be carried from one place to another within the body- nutrients, wastes (headed for elimination from the body) and body heat through blood vessels. Long before modern medicine, blood was viewed as magical, because when it drained from the body, life departed as well.
