Cloud computing is the on-demand availability of computer system resources, especially data storage and computing power, without direct active management by the user. The term is generally used to describe data centers available to many users over the Internet. Large clouds, predominant today, often have functions distributed over multiple locations from central servers.

Cloud computing - Wikipedia

Abstract. This IDC study provides a detailed description of IDC's software market taxonomy. For 2018, the taxonomy includes 83 individual functional markets grouped within a hierarchy of 19 secondary markets, which in turn aggregate into three primary segments: applications, application development and deployment, and systems infrastructure software.

IDC's Worldwide Software Taxonomy, 2018: Update

The SBR AU Taxonomy is a collection of data elements that may be required to be reported by business to government agencies. These data elements are classified and defined in the SBR AU Taxonomy - like a dictionary.
