In chemistry and physics, a phase is a physically distinctive form of matter, such as a solid, liquid, gas, or plasma. A phase of matter is characterized by having relatively uniform chemical and physical properties. Phases are different from states of matter. The states of matter (e.g., liquid, solid, gas) are phases, but matter can exist in different phases yet remain in the same state of ...

Plugging these into the equilibrium equation yields. If K_c , $[A]_0$, $[B]_0$, and $[C]_0$ are given, then this equation becomes simply a quadratic equation in x and is solved via the familiar quadratic formula. Example Basic Start-Change-Finish problem. Suppose we start with equal initial concentrations of A and B, $[A]_0 = [B]_0 = 0.14 \text{ M}$, and do the same reaction at the same temperature so that ...

In chemistry, a solution is a special type of homogeneous mixture composed of two or more substances. In such a mixture, a solute is a substance dissolved in another substance, known as a solvent. The mixing process of a solution happens at a scale where the effects of chemical polarity are involved, resulting in interactions that are specific to solvation.
