In mathematics, a differentiable manifold (also differential manifold) is a type of manifold that is locally similar enough to a linear space to allow one to do calculus. Any manifold can be described by a collection of charts, also known as an atlas. One may then apply ideas from calculus while working within the individual charts, since each chart lies within a linear space to which the usual ...

of calculus or infinitesimal calculus, is a history of a mathematical discipline focused on limits, functions, derivatives, integrals, and infinite series. Isaac Newton and Gottfried Leibniz independently invented calculus in the mid-17th century. A rich history and cast of characters participating in the development of calculus both preceded and followed the contributions of these singular ...

Hyperbolic Geometry. A non-Euclidean geometry, also called Lobachevsky-Bolyai-Gauss geometry, having constant sectional curvature. This geometry satisfies all of Euclid's postulates except the parallel postulate, which is modified to read: For any infinite straight line and any point not on it, there are many other infinitely extending straight lines that pass through and which do not intersect.

The basic elements of Euclidean plane geometry are points and lines. On the sphere, points are defined in the usual sense. The analogue of the "line" is the geodesic, which is a great circle; the defining characteristic of a great circle is that the plane containing all its points also passes through the center of the sphere. Measuring by arc length shows that the shortest path between two ...

The natural logarithm of 2 is a transcendental quantity that arises often in decay problems, especially when half-lives are being converted to decay constants. $\ln 2$ has numerical value $\ln 2 = 0.69314718055994530941\dots$ (1) (OEIS A002162). The irrationality measure of $\ln 2$ is known to be less than 3.8913998 (Rukhadze 1987, Hata 1990). It is not known if $\ln 2$ is normal (Bailey and Crandall 2002).
