A primitive root of a prime p is an integer g such that $g \pmod{p}$ has multiplicative order $p-1$ (Ribenboim 1996, p. 22). More generally, if $\text{GCD}(g,n)=1$ (g and n are relatively prime) and g is of multiplicative order $\phi(n)$ modulo n where $\phi(n)$ is the totient function, then g is a primitive root of n (Burton 1989, p. 187). The first definition is a special case of the second since $\phi(p)=p-1$ for ...

Arithmetica is the major work of Diophantus and the most prominent work on algebra in Greek mathematics. It is a collection of problems giving numerical solutions of both determinate and indeterminate equations. Of the original thirteen books of which Arithmetica consisted only six have survived, though there are some who believe that four Arabic books discovered in 1968 are also by Diophantus.

A complex number is a number that can be expressed in the form $a + bi$, where a and b are real numbers, and i is a solution of the equation $x^2 = -1$. Because no real number satisfies this equation, i is called an imaginary number. For the complex number $a + bi$, a is called the real part, and b is called the imaginary part. Despite the historical nomenclature "imaginary", complex numbers are ...

All too often young children fail to remember the names of pattern block shapes. Over the years, Kristin Garrison has found that if teachers don't give students frequent opportunities to use pattern block names and become familiar with the attributes of the shapes, when handling pattern blocks after they leave kindergarten and first grade, they...

Recognizing that construct measurement development is at the core of theory building (Venkatraman, 1989), we intend to contribute to the development of SCM constructs with an initial set of operational measurements that exhibit sound psychometric properties. Towards the journey of developing theoretical constructs in SCM, we examine over 400 articles from the diverse disciplines noted above.

To deal with these difficulties in conducting experimental and correlation studies in CSs, a variety of new computational tools are emerging. These include computational modeling and simulation, social network analysis, knowledge discovery through data mining, data farming and evolutionary computation, to name a few (see Table 2). In nursing practice, these tools are incorporated into the ...
