Biological Psychology James Kalat

Stress, either physiological or biological, is an organism's response to a stressor such as an environmental condition. Stress is the body's method of reacting to a condition such as a threat, challenge or physical and psychological barrier. Stimuli that alter an organism's environment are responded to by multiple systems in the body.

Stress (biology) - Wikipedia

Evolutionary psychology is a theoretical approach in the social and natural sciences that examines psychological structure from a modern evolutionary perspective. It seeks to identify which human psychological traits are evolved adaptations – that is, the functional products of natural selection or sexual selection in human evolution. Adaptationist thinking about physiological mechanisms ...

Abstract Episodic memory is a neurocognitive (brain/mind) system, uniquely different from other memory systems, that enables human beings to remember past experiences. The notion of episodic memory was first proposed some 30 years ago. At that time it was defined in terms of materials and tasks. It was subsequently refined and elaborated in terms of ideas such as self, subjective time, and ...

Az agykapacitás 10 százalékának mítosza egy széleskörűen elterjedt hiedelem, ami szerint az emberek agyuk mindössze kb. 10 százalékát használják. Ezzel együtt az állítás azt is sugallja, hogy lehetséges kiaknázni ezt a felhasználatlan területet, és vele az emberi intelligenciát növelni.. Bár az intelligencia számos tényezője fejleszthető gyakorlással, alaptalan ...

Az agykapacitás 10 százalékának mítosza - Wikipédia

Origem. Uma hipótese para a origem do mito refere-se à teoria da reserva de energia, criada pelos psicólogos de Harvard William James e Boris Sidis na década de 1880. Eles basearam a teoria na análise de William Sidis, uma criança prodígio que teve resultados em testes de QI similares a de adultos, entre 250 e 300. William James disse em audiências públicas que as pessoas só encontram ...
