1. Introduction. The first small RNA, lin-4, was discovered in 1993 through a genetic screening in nematodes. Later in the same year, the regulation of lin-14 by lin-4 was discovered, which demonstrated the regulatory function of small RNAs. The shorter lin-4 RNA is now recognized as the origin of an abundant class of small regulatory RNAs, known as microRNAs (miRNAs).

A sigma factor (σ factor) (specificity factor) is a protein needed for initiation of transcription in bacteria. It is a bacterial transcription initiation factor that enables specific binding of RNA polymerase (RNAP) to gene promoters. It is homologous to archaeal transcription factor B and to eukaryotic factor TFIIB. The specific sigma factor used to initiate transcription of a given gene ...

With the fading effect of the political uncertainty and poor weather conditions that held it back in 2017, growth rebounded in 2018. In 2019, growth is expected to remain robust, supported in particular by public consumption and investment. Despite fiscal consolidation efforts, investment spending on infrastructure (transport, electricity) is expected to be buoyant.
