A more scientific approach would be to compare the macroscopic physical properties of the three states of matter, but even here we run into difficulty. It is true, for example, that the density of a gas is usually about a thousandth of that of the liquid or solid at the same temperature and pressure; thus one gram of water vapor at 100°C and 1 atm pressure occupies a volume of 1671 mL; when ...

AQA chemistry specification - States of matter. The particles are close together and vibrate about fixed positions. They cannot move any closer together and so the solid is incompressible.. The particles are held in fixed positions (apart from vibrations), which means that the solid keeps its shape in the macroscopic world unless subject to forces that bend, flatten or otherwise distort the shape.
