Most materials are very nearly homogeneous, therefore we can usually write  $k = k(T)$ . Similar definitions are associated with thermal conductivities in the y- and z-directions ( $k_y$ ,  $k_z$ ), but for an isotropic material the thermal conductivity is independent of the direction of transfer,  $k_x = k_y = k_z = k$ .

Because the coefficient of performance (COP) is primarily concerned with the core refrigeration system, using it for optimisation purposes may lead to higher than necessary energy consumption. This hypothesis was studied with a simple equation relating this coefficient to the coefficient of system performance (COSP), and with a software model based on an R404A refrigeration system installed in ...
