In physics, relativistic quantum mechanics (RQM) is any Poincaré covariant formulation of quantum mechanics (QM). This theory is applicable to massive particles propagating at all velocities up to those comparable to the speed of light c , and can accommodate massless particles. The theory has application in high energy physics, particle physics and accelerator physics, as well as atomic ...

In quantum mechanics, a Hamiltonian is an operator corresponding to the sum of the kinetic energies plus the potential energies for all the particles in the system (this addition is the total energy of the system in most of the cases under analysis). It is usually denoted by \hat{H} , also or \hat{H} . Its spectrum is the set of possible outcomes when one measures the total energy of a system.

Las soluciones estacionarias de la ecuación de Schrödinger en un campo central electrostático, están caracterizadas por tres números cuánticos (n, l, m) que a su vez están relacionados con lo que en el caso clásico corresponderían a las tres integrales del movimiento independientes de una partícula en un campo central. Estas soluciones o funciones de onda normalizadas vienen dadas en

Ein Wasserstoffatom ist ein Atom des chemischen Elements Wasserstoff (Symbol: H). Das Atom besteht aus einem einfach positiv geladenen Atomkern (mit einem Proton und bei natürlich vorkommenden Isotopen null bis zwei Neutronen) und einem negativ geladenen Elektron. Elektron und Atomkern sind aufgrund ihrer entgegengesetzten elektrischen Ladung aneinander gebunden (Coulombsches Gesetz).

Es decir, la ecuación dice que: Cuando el operador Hamiltoniano actúa sobre cierta función de onda Ψ , y el resultado es proporcional a la misma función de onda Ψ , entonces Ψ es un estado estacionario, y la constante de proporcionalidad, E , es la energía del estado Ψ . La ecuación de Schrödinger independiente del tiempo, en terminología de álgebra lineal, es una ecuación con ...
