Practice balancing chemical equations by changing the coefficients of reactants and products. As the equation is manipulated, the amount of each element is shown as individual atoms, histograms, or numerically. Molar masses of reactants and products can also be calculated and balanced to demonstrate conservation of mass. Full Lesson Info.

Activity A: Balancing equations Get the Gizmo ready: • Check that the Combination reaction is selected and that all coefficients are set to one. (The coefficients are the numbers in the boxes.) Introduction: The equation  $H_2 + O_2 \rightarrow H_2O$  is unbalanced because there are two oxygen atoms on the reactants side of the equation, and only one on the products side of the equation.

Activity A: Interpreting chemical formulas Get the Gizmo ready: Erase the chemical formulas in each text box. Check that the Visual displays are selected. Introduction: To balance a chemical equation, you first need to be able to count how many atoms of each element are on each side of the equation. In this activity, you will practice counting the atoms that are represented in chemical formulas.
