

## *Chemistry Nail Lab Answers*

[Download File PDF](#)

*Chemistry Nail Lab Answers - If you ally compulsion such a referred chemistry nail lab answers books that will present you worth, get the utterly best seller from us currently from several preferred authors. If you desire to hilarious books, lots of novels, tale, jokes, and more fictions collections are as well as launched, from best seller to one of the most current released.*

*You may not be perplexed to enjoy every ebook collections chemistry nail lab answers that we will no question offer. It is not in this area the costs. It's virtually what you habit currently. This chemistry nail lab answers, as one of the most practicing sellers here will completely be among the best options to review.*

In chemistry we are doing the nail lab experiment. ( when you add one nail in a solution of copper ( II ) chloride. for my moles of copper i got .033 for my moles of iron i got .031 i have to create a BCA table. Is the equation  $\text{Fe} + \text{CuCl}_2 = \text{Cu} + \text{FeCl}_2$  ? how would you do the BCA table for this ? because they both have to be on the products side or the reactants side dont they ? i cannot put the ...

Mass nails after reaction 3.46 g Mass 250 ml beaker + dry copper 116.25 g 1. Determine the mass of copper produced and the mass of iron used during the reaction. Copper:  $120.73\text{ g} - 113.85\text{ g} = 2.4\text{ g}$  Cu Iron:  $5.59\text{ g} - 3.46\text{ g} = 2.13\text{ g}$  Fe 2. Calculate the moles of copper and moles of iron involved in this reaction.

**Nail Lab Report Format - Honors Chemistry Period 1**

I've done the three experiments with copper sulfate, copper (II) chloride and copper nitrate. The effect for each of the three salts is very different. First I did experiments with different types of nails, but these results are very inconsistent. Some nails are copper plated quickly, also in nitrate solution, other nails are not copper-plated.

Iron/Copper Nail Lab . In this lab, an iron nail is placed into a solution of copper (II) chloride on the first day. On the second day, it is removed and the copper that has collected on the nail is scraped off. On the third day, final masses are taken and converted to moles for a comparison. Procedure: Day 1. 1. Label, then mass a 250 mL ...

A Claim, Evidence, Reasoning (CER) is a short writing piece that allows the students to succinctly discuss their lab activities. The CER must always begin with a Claim (C). The Claim should be a concise statement that summarizes the main point or idea of the laboratory experiment. For instance, "Armada is a great place to live."

**Copper Sulfate and Iron Nail Lab: Part 1**

So, we did a lab in class called Nail Lab. We had to get three iron nails and put them into copper (ii) chloride solution. They had instant rust. We measured and all. But my questions are the conclusion questions: 1) Why did the reaction stop? Which reactant was used up? How do you know? 2) Describe what was happening to the atoms of iron and copper during the reactions.
