Four of the species of finch observed by Darwin on the Galápagos Islands, showing variation of beak. When the first of the Galápagos Islands arose from the ocean floor around 3m years ago, they were naked, angry, lava-spewing cones devoid of life. Now, millions of years later, they are alive with some of the world's most iconic animals.

### **Origin of the species: where did Darwin's finches come from?**

Charles Darwin published "On the Origin of Species" on November 24, 1859 and forever changed the way humans think about science. It's not an exaggeration to say that Darwin's landmark work became one of the most influential books in history.

### **The Legacy of Darwin's "On the Origin of Species"**

When Charles Darwin published The Origin of Species 150 years ago he consciously avoided discussing the origin of life. However, analysis of some other texts written by Darwin, and of the correspondence he exchanged with friends and colleagues demonstrates that he took for granted the possibility of a natural emergence of the first life forms.
