In evolutionary biology, a spandrel is a phenotypic characteristic that is a byproduct of the evolution of some other characteristic, rather than a direct product of adaptive selection.. The term "spandrel" originated as an architectural word for the roughly triangular space between the tops of two adjacent arches and the ceiling. These spaces were not actually utilized until later on, when ...

Evolutionary biology is the subfield of biology that studies the evolutionary processes that produced the diversity of life on Earth, starting from a single common ancestor. These processes include natural selection, common descent, and speciation.. The discipline emerged through what Julian Huxley called the modern synthesis (of the 1930s) of understanding from several previously unrelated ...

Synthetic biologists seek to understand, design and extend biology, and biological tools, from their simplest component parts and processes. Such a reductionist approach has been a paradigm shift in molecular biology and has fostered the rapid growth of the Synthetic Biology field and its subdivisions: Biodesign engineering, xenobiology, synthetic genomics among others.
