Bone, or osseous tissue, is a hard, dense connective tissue that forms most of the adult skeleton, the support structure of the body. In the areas of the skeleton where bones move (for example, the ribcage and joints), cartilage, a semi-rigid form of connective tissue, provides flexibility and smooth surfaces for movement.

ICD-10 Version:2016 - World Health Organization

Vasculitis, referred to as angiitis, that affects the central nervous system (CNS) is one of the most formidable diagnostic and therapeutic challenges for physicians because the clinical manifestations of CNS vasculitis are highly variable, the CNS is a common target of many forms of systemic vasculitis and may also be the sole target of vasculitis, and specific noninvasive tests are lacking ...

Primary Angiitis of the Central Nervous System

Dopamine (DA, a contraction of 3,4-dihydroxyphenethylamine) is an organic chemical of the catecholamine and phenethylamine families. It functions both as a hormone and a neurotransmitter, and plays several important roles in the brain and body. It is an amine synthesized by removing a carboxyl group from a molecule of its precursor chemical L-DOPA, which is synthesized in the brain and kidneys.

Dopamine - Wikipedia

General Information Central nervous system lymphoma is a rare non-Hodgkin lymphoma in which malignant (cancer) cells from lymph tissue form in the brain and/or spinal cord (primary CNS) or spread from other parts of the body to the brain and/or spinal cord (secondary CNS). Because the eye is so close to the brain, primary CNS lymphoma can also start in the eye (called ocular
