The Stanton number,  $St$ , is a dimensionless number that measures the ratio of heat transferred into a fluid to the thermal capacity of fluid. The Stanton number is named after Thomas Edward Stanton (1865–1931). It is used to characterize heat transfer in forced convection flows.  $St = \frac{h}{\rho c_p u}$  where  $h$  = convection heat transfer coefficient;  $\rho$  = density of the fluid;  $c_p$  = specific heat of the fluid

Flux describes any effect that appears to pass or travel (whether it actually moves or not) through a surface or substance. A flux is either a concept based in physics or used with applied mathematics. Both concepts have mathematical rigor, enabling comparison of the underlying mathematics when the terminology is unclear.

Nell'ambito della matematica e dei fenomeni di trasporto, le leggi di Fick sono equazioni differenziali alle derivate parziali ellittiche non lineari che descrivono le variazioni di concentrazione nei materiali in cui sono in atto fenomeni di diffusione molecolare in assenza di diffusione termica, che invece viene tenuta in conto dalla più generale legge di Soret.

In fisica per conduzione termica si intende la trasmissione di calore che avviene in un mezzo solido, liquido o aeriforme (all'interno di un corpo solo o due corpi tra loro in contatto) dalle zone a temperatura maggiore verso quelle con temperatura minore.. Oltre alla conduzione termica, esistono altre due modalità di trasferimento di calore, che sono l'irraggiamento e la convezione

Las leyes de Fick sobre la difusión son leyes cuantitativas, escritas en forma de ecuación diferencial que describen matemáticamente al proceso de difusión de materia o energía en un medio en el que inicialmente no existe equilibrio químico o térmico. Reciben su nombre del médico y fisiólogo alemán Adolf Fick (1829-1901), que las derivó en 1855.
