### **AP BIOLOGY NAME HEREDITY - Welcome to Mr. Hall's Lab**

Best Answer: This is a modification of the dihybrid 9:3:3:1 ratio, so there are two genes involved red/yellow and white and there is epistasis, where 1 gene suppresses the effects of the other one. In this case, as there are more white onions than coloured ones, it is the white gene that is epistatic to the red/yellow one. To get a 9:3:3:1 ratio ignoring epistasis the cross must have been RrWw ...

### **Genetics - The Biology Corner**

Activity 16.1 This activity asks students to review and integrate the evidence from a series of experiments that together demonstrated that DNA (not protein) is the hereditary material. The vast majority of introductory biology students already know that DNA is the hereditary material (and have known this "all their lives").

heres the question: in fruit flies, the mutation for bar eyes is sex-linked and dominant. If a bar-eyed female is crossed with a red-eyed male, what proportion of the male offspring will have bar eyes? now im thinking either 50% or 100% how is it possible to tell? since the mutation is dominant, the female fly could be heterozygous or homozygous for the dominant allele.. however when i checked ...
