Normal Transition: A Birth. The transition from fetus to neonate, commonly called birth, is one of the most profound changes that human will ever undergo. During this transition, the fetus ceases to receive blood, oxygen, and nutrients from the maternal circulation and must derive those things from the outside world.

NRP Study Guide - National CPR Association

Any extended sitting — such as at a desk, behind a wheel or in front of a screen — can be harmful. An analysis of 13 studies of sitting time and activity levels found that those who sat for more than eight hours a day with no physical activity had a risk of dying similar to the risks of dying posed by obesity and smoking.

Sitting risks: How harmful is too much sitting? - Mayo Clinic

To better understand this condition, there are two concepts vital to be mastered: conductivity and automaticity. Conductivity: is the property of the heart cells to transmit spontaneous impulses starting from the sinoatrial (SA) node, activating all parts of the heart muscle almost spontaneously. Conductivity is the basis of cardiac contraction and relaxation, allowing the heart to beat.
