Two weeks ago, I finished reading Book of Proof (link goes to Amazon) by Professor Richard Hammack, and so far, it was the best book that I have read about introduction to mathematical proofs. I recommend this book to high school students who are interested in pursuing a mathematics degree, to college students who are math majors, and to teachers

Book of Proof. The third part provides more examples of common proofs, such as proving non-conditional statements, proofs involving sets, and disproving statements, and also introduces mathematical induction. Finally the fourth part returns to basic mathematical structures, discussing relations, functions, and cardinality.

Nice, affordable textbook with plenty of excersies and selected solutions for odd numbered questions in the back of the text. I would read it as a first book on proofs, but it is only an introduction. I also liked the book How To Prove It, which has the same number of excersies but a deeper discussion of the concepts than in The Book of Proof.
