In this lesson, we'll be reviewing the major parts of frog anatomy, including the external and internal structures you would expect to see during a dissection.

Frog Anatomy: External & Internal - Study.com

Dissection (from Latin *dissecare* "to cut to pieces"; also called anatomization) is the dismembering of the body of a deceased animal or plant to study its anatomical structure. Autopsy is used in pathology and forensic medicine to determine the cause of death in humans. Less extensive dissection of plants and smaller animals preserved in a formaldehyde solution is typically carried out or ...

Dissection - Wikipedia

The glottis (bilateral vocal folds, each attached to the vocal process of a mobile arytenoid cartilage) is critical to the two major functions of the larynx: 1] to close the airway to the lungs and prevent the inhalation pneumonia that would result from inhaling bacterial laden ingesta; and 2] to vocalize as a means of communicating with others. ...

Carnivore Anatomy Lab 23 Introduction

Superficial veins are accessible sites for obtaining blood samples or administering intravenous drugs. The medial saphenous vein is a preferred site for venipuncture in the cat. In the dog, the cranial branch of the lateral saphenous vein is the most prominent of the superficial veins. However, because the vein is relatively mobile it is not easy to penetrate.

Carnivore Anatomy Lab 20 Introduction

Unit 4: Skeletal System 1. Identify and describe the functions of the skeletal system. 2. Distinguish between long bones, short bones, flat bones, and irregular bones and provide an example of each.
