In biology, a gene is a sequence of nucleotides in DNA or RNA that codes for a molecule that has a function. During gene expression, the DNA is first copied into RNA. The RNA can be directly functional or be the intermediate template for a protein that performs a function. The transmission of genes to an organism's offspring is the basis of the inheritance of phenotypic trait.

Gene - Wikipedia

Tumor protein p53, also known as p53, cellular tumor antigen p53 (UniProt name), phosphoprotein p53, tumor suppressor p53, antigen NY-CO-13, or transformation-related protein 53 (TRP53), is any isoform of a protein encoded by homologous genes in various organisms, such as TP53 (humans) and Trp53 (mice). This homolog (originally thought to be, and often spoken of as, a single protein) is ...

To enable RNA detection using IMC, we adapted the widely used RNAscope technique (Wang et al., 2012) for detection with metal tags. The approach makes use of serial hybridization steps to build multiple, large DNA structures across an RNA molecule of interest (Figure 1A). Each of these structures can then be hybridized to hundreds of oligonucleotides bound to reporters.
