Atomic units (au or a.u.) form a system of natural units which is especially convenient for atomic physics calculations. There are two different kinds of atomic units, Hartree atomic units and Rydberg atomic units, which differ in the choice of the unit of mass and charge. This article deals with Hartree atomic units, where the numerical values of the following four fundamental physical ...

A nuclear weapon (also called an atom bomb, nuke, atomic bomb, nuclear warhead, A-bomb, or nuclear bomb) is an explosive device that derives its destructive force from nuclear reactions, either fission (fission bomb) or from a combination of fission and fusion reactions (thermonuclear bomb). Both bomb types release large quantities of energy from relatively small amounts of matter.

Lumens and foot-candles essentially measure the same thing--the amount of light arriving at an object or area you want to illuminate. The only catch is that lumens are usually interpreted to measure the amount of light arriving in one square meter--the metric system--while foot-candles measure how much light arrives at a given object one foot away from the light source.

How to Convert Foot-Candles to Lumens | Sciencing

Although square feet and linear feet are measurements of different quantities, it makes sense to compare them in certain situations. Perhaps the most common is in building projects in which you have to cover a certain area, such as a floor, wall or fence panel, with lumber of a particular dimension.

Specific gravity: Specific gravity, ratio of the density of a substance to that of a standard substance. The usual standard of comparison for solids and liquids is water at 4 °C (39.2 °F), which has a density of 1.0 kg per litre (62.4 pounds per cubic foot). Gases are commonly compared with dry air, which has a

Gravity is such a pesky thing. It prevents us from doing all sorts of wonderful things. Such as floating through the air like a balloon, traveling into orbit without paying an ugly cost in delta V, and being morbidly obese but still light on your feet like Baron Vladimir Harkonnen. By the same token, it would also be incredibly useful to be able to create gravity on command.

Like the Romantics before them, genre-sf writers have generally been on the side of Faust, convinced that the quest for knowledge was a sacred one, no matter how fondly a jealous God might prefer blind faith. Characters in bad Hollywood Monster Movies might be able to sign off with a resigned admission that "there are things Man was not meant to know", but nothing could be more alien to the ...
