Evolutionary biology is the subfield of biology that studies the evolutionary processes that produced the diversity of life on Earth, starting from a single common ancestor. These processes include natural selection, common descent, and speciation. The discipline emerged through what Julian Huxley called the modern synthesis (of the 1930s) of understanding from several previously unrelated ...

Students often complain that plants are boring, and they don't do anything quickly. Pollen tube growth is a surprisingly rapid process in certain conditions, and the pace of growth is measurable under a microscope during the course of a (double) lesson.

Observing the growth of pollen tubes | Nuffield Foundation

Cancer Stem Cells. What is a stem cell? A stem cell is a special cell type that has both the ability to reproduce exact copies of itself (also called self-renewal) and the ability to change (differentiate) into one of the many specialized cell types in the body. Examples of specialized cells that arise from stem cells include nerves, muscles and the cells lining our digestive system.

In biology, an organism (from Greek: $\dot{o}\rho\gamma\alpha\nu\iota\sigma\mu\dot{o}\varsigma$, organismos) is any individual entity that exhibits the properties of life. It is a synonym for "life form". Organisms are classified by taxonomy into specified groups such as the multicellular animals, plants, and fungi; or unicellular microorganisms such as a protists, bacteria, and archaea. All types of organisms are capable of ...
