I'm doing some practical work on the binomial distribution but currently finding it difficult to answer iii-c. Here is the full question and the answers I've provided. A bank claims that 80% of its customers use a cashpoint at least once a month. If this claim is true, what is the probability that:

probability - Binomial distribution question - Mathematics ...

A binomial experiment is one that possesses the following properties:. The experiment consists of n repeated trials;. Each trial results in an outcome that may be classified as a success or a failure (hence the name, binomial);. The probability of a success, denoted by p, remains constant from trial to trial and repeated trials are independent.. The number of successes X in n trials of a ...

Exam Questions - Binomial expansion, other | ExamSolutions

Binomial distribution is the discrete probability distribution with parameters n and p. This is the basis for the popular binomial test of statistical significance. In a binomial distribution there are always two mutually exclusive events (as binomial means two). They are termed as fail and success.

That pattern is the essence of the Binomial Theorem. Now you can take a break. When you come back see if you can work out (a+b) 5 yourself. Answer (hover over): a 5 + 5a 4 b + 10a 3 b 2 + 10a 2 b 3 + 5ab 4 + b 5

Binomial Theorem - Math is Fun - Maths Resources

Expand (x 2 + 3) 6; Students trying to do this expansion in their heads tend to mess up the powers. But this isn't the time to worry about that square on the x.I need to start my answer by plugging the terms and power into the Theorem. The first term in the binomial is "x 2", the second term in "3", and the power n is 6, so, counting from 0 to 6, the Binomial Theorem gives me:
