(The key big bang prediction is the black-body spectrum of the CMB, which was not measured with high accuracy until COBE in 1990). After some reformulation, the Big Bang has been regarded as the best theory of the origin and evolution of the cosmos.

History of the Big Bang theory - Wikipedia

Big Bang theory holds that our universe began 13.7 billion years ago, in a massive expansion that blew space up like a balloon. Here's a brief rundown of what astronomers think happened.

The Big Bang: What Really Happened at Our Universe's Birth?

The Big Bang. Although the term implies some kind of explosion, there really wasn't an outburst or a bang. It was really the rapid expansion of space and time. Think of it like blowing up a balloon: as someone blows air in, the exterior of the balloon expands outward.

The Big Bang and the Origin of Everything - ThoughtCo

The Big Bang Theory is the leading explanation about how the universe began. At its simplest, it says the universe as we know it started with a small singularity, then inflated over the next 13.8 billion years to the cosmos that we know today. Because current instruments don't allow astronomers to peer back at...

Big History Project: The Universe

Big Bang Theory. The Big Bang theory is an effort to explain what happened at the very beginning of our universe. Discoveries in astronomy and physics have shown beyond a reasonable doubt that our universe did in fact have a beginning. Prior to that moment there was nothing; during and after that moment there was something: our universe.
